Microsoft. *https://microsoft.com*

Software developer. *September 2025 - October 2026.*

- Co-delivered Microsoft Entra Connect Sync to customer deployment readiness in the French sovereign cloud; validating deployment and release prerequisites.
- Owned the Entra Connect Sync German sovereign-cloud buildout with engineering leadership, reaching customer deployment readiness while reducing the reported buildout timeline by 31.25% compared with the earlier French sovereign-cloud delivery.
- Coordinated validation and release of the latest version of Microsoft Entra Connect Sync to the public cloud, driving sign-off across 8 different partner teams.
- Helped complete migration of 125 build-verification tests to a cloud-based automated test platform, reducing the reported validation cycle from 2 weeks to approximately 6 hours and enabling daily regression testing rather than release-only validation.

Tyk, *UK*. *https://tyk.io*

Senior Software developer. *July 2021 - June 2024.*

- Led the team in reducing the cost of operations by migrating databases that are used by customers on the free tier, from a costly SaaS to our inhouse kubernetes server cluster.
- Led the integration of Azure Active Directory as a single sign on(SSO) provider on Tyk cloud.
- Led the design and implementation of a feature to prevent spam users from signing up to our service. This reduced spam by 60% and reduced our server costs by 36%.
- Led the implementation of observability(using OpenTelemetry) on my team to enable easier debugging and reduce the time taken to resolve customer issues.
- Wrote technical blog posts on the company's website which served as a customer acquisition strategy for tech savvy users.
- Started a code improvement initiative which increased the project's test code coverage by 40% while also improving its concurrency safety.

JUMO*, Kenya.* *https://www.jumo.world*

Senior Software developer. *May 2018 - July 2021.*

- Reduced the company's financial risk by creating a common Money library. This library encapsulates the common money related operations(e.g. currency conversion) and provides a safe API devoid of the various money related bugs.
- Strengthened account security by implementing concurrent session controls to alert users of multiple logins, a key feature in mitigating unauthorized access in distributed identity systems.
- Reduced cloud costs of our service by 20%. This was done by analysing pod utilisation on kubernetes and then right-sizing the pods to match the expected usage.
- Improved the developer onboarding documentation thus reducing the time taken by new developers to become productive.
- I improved the oncall experience by associating logs with corresponding metric tags. This reduced the time taken to resolve incidents.

JUMO*, Kenya.* *https://www.jumo.world*

Software developer. *April 2015 - May 2018.*

- Improved the throughput of a USSD application that is used in 8 different countries from 10 requests/sec to 280 requests/sec.
- Proposed & introduced static analysis tools to our build pipelines, this resulted in a 15% reduction of bugs shipped to production.
- Reduced the time to integrate with a new partner from 3months to 2months by creating a configurable partner mock service.
- Lead the integration of our SMS software system with the SMS gateways of 7 different mobile network operators around the world.
- Re-architected infrastructure & migrated from AWS ec2 to AWS elasticbeanstalk. This increased service uptime from 90% to 99% while also decreasing deploy durations.

WezaTele*, Kenya.*

Senior Software developer. *September 2013 - April 2015.*

- Improved the database query time for a client's eCommerce software application by 24%.
- Implemented an SMS ordering solution for a large FMCG distributor that cut out inefficiencies in their distribution channels.
- Optimized in-house unit tests thereby decreasing their run time by 16%.
- Rolled out a business intelligence (BI) and analytics solution for various clients, enabling them to make sense of the raw data generated by their various business processes.
- Designed and implemented a web scraper that scraped data from an SMS reporting engine and used Splunk(a log analysis service) to analyze and troubleshoot the data thus generated.

Open source software developer.

September 2013 - to date.

- Created and continues to maintain meli, which is a container orchestration tool that is significantly faster than the industry standard.
- Created and maintains sewer, which is a tool that makes it easy to create and manage SSL certificates and their associated keys.
- Created and maintains naz, which is an async SMPP client..
- Contributor to various other open source repositories.

Education:

Linux Foundation*:* Certified Kubernetes Administrator, 2024.
Dartmouth College: Certificate in Business and Entrepreneurship, *July 2014.*
University of Nairobi: Bsc Electrical & electronic engineering. *Second class honours, August 2012.*

Programming languages and tools:

Languages: Python(9 years), Golang(7 years), Javascript(2 years), SQL(8 years), C++(1 year), C#(1 year)
Databases: PostgreSQL(8 years), MongoDB(4 years), Sqlite(2 years), RabbitMQ(8 years)

Tools: Git(8 years), Jira(7 years), Github actions(4 years), Active Directory(2 years)

Cloud: AWS(7 years), Microsoft Azure(3 years), GCP(1 year)
